Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

DETAILED ACTION

Claim Rejections - 35 USC § 112

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claim 4 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claim 4 “the second side” and “the first side” lack positive antecedent basis.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

4. Claims 1-2, 10-11 are rejected under 35 U.S.C. 102(e) as being anticipated by Turner.

Turner discloses a pedal and motor assisted power system in a bicycle, the system comprising:

a pedal section comprising:

Art Unit: 3611

first and second pedal members 34;

a crank shaft 42 connecting the pedal members;

a crank housing 48 in which the crank shaft is located;

a sprocket section 30 having a chain and sprocket drive connection to the drive wheel 16;

a motor section 28;

a speed reducing gear section 74 connecting to said motor section and having a gear section drive output 82;

a power assist drive section comprising a power assist drive member 92 having a power assist drive connection between the gear section drive output and the sprocket section and being concentrically mounted around the crank shaft;

said system being characterized in that the sprocket section has a first pedal overrunning drive connection 102 with said pedal section and the power assist drive connection has a second overrunning drive connection 104;

whereby the bicycle is able to operate in the four recited operating modes, see col. 9 lines 5-14;

wherein the speed reducing gear section comprises a center drive shaft having an offset drive portion on which is rotatably mounted an orbiting cluster gear section that rotates in an orbiting motion to produce a rotational speed reduction ratio at least as great as about 20:1, see col. 11 lines 65-68.

Claim Rejections - 35 USC § 103

Art Unit: 3611

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. Claim 12 is rejected under 35 U.S.C. 103(a) as being unpatentable over Turner.

Turner discloses the claimed invention except the gear reduction ratio is 31.86:1 instead of at least 40:1. However, Turner suggests in col. 11 lines 60-61 that other gear ratios could be used and it would be obvious to one of ordinary skill in the art to use different gear ratios as a result of routine experimentation dependent on the speed and torque of the electric motor. “[I]t is not inventive to discover the optimum or workable ranges by routine experimentation.” In re Aller, 220 F.2d 454, 456, 105 USPQ 233, 235 (CCPA 1955).

Allowable Subject Matter

7. Claims 3, 5-9 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

8. Claim 4 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, second paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.

Conclusion

Art Unit: 3611

9. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Sakai et al., Suzuki et al., Yonekawa et al., Miyazawa et al., Suganuma et al., and Rudwick disclose electric motor assisted bicycle drives.
